- Immune System Problems .5

Foods That Will Improve Your Gut Health

Probiotic supplement: Taking a probiotic will get some of that healthy bacteria back in your gut. The recommended CFU (colony .1 forming units) is 15-50 billion and maybe start with the lower CFU count with a healthy diet. The good bacteria will regenerate

.themselves if you are eating healthy

Greek Yogurt or Kefir: Kefir is yogurt's cousin and is even better for your gut than yogurt. It's fermented goat, cow, or sheep milk. .2

. It's delicious and drinkable

Fermented foods: Try kimchi which is pickled cabbage (ok it smells bad but tastes delicious)! Some other good ones are pickles, .3

.sauerkraut, and kombucha

.Bone broth: Can heal your gut and improve mineral deficiencies .4

.Healthy fats: Avocados, eggs, salmon, coconut oil, etc. can improve gut health .5

.Steamed non-starchy veggies: They help heal the gut and are easy to digest .6
